## Before installing Carburetor kit

**Your EMPI EPC carburetor kit is jetted for the most common applications based on input from professional installers and technicians.**

**As in any case when modifying Original Equipment, results may vary. Geographic locations and their conditions such as altitude, original factory emissions or alternative fuels to name a few, may require additional analysis after installation is complete to obtain the desired results.**

**Regulating the fuel pressure is very important, a fuel pressure regulator must be used. Read your directions.**

**If needed, main jets, air corrector jets and fuel pressure regulators are available from your EMPI Dealer.**

**Be sure to cap, plug or remove ALL of the ports and lines as called for in your set of instructions.**
